Fannie Mae Developer Portal November 2020 Release

What has changed?

- Generating an Application now requires fewer steps and is much faster.
- The dashboard now shows all created applications and their associated credential information. Any API keys previously created are also listed.
- API roles previously granted will now continue to be associated to your system ID (based on your organization), so you will no longer have to request role access to the Developer Portal.

Where are the changes visible?

The application creation process has an updated workflow. The homepage has also been redesigned.

When did this take effect?

The updates went live in production on November 6.

What are the benefits of these updates?

The process to create an application has been streamlined and it will take less time to access an API.

Are Technology Service Providers (TSPs) affected?

TSPs are now able to quickly give access to their customers as they will no longer be required to enter a system ID password to generate an application.
