

Developer Portal 2.5 Release Notes

November 6, 2020

What's new on Developer Portal?

- **Simplified Application Creation Process** – The key generation process introduces a new concept of an “application”, reducing the creation process from five steps to three.
- **Birth-righted Organization Access** – Users will no longer need to request role access to the Developer Portal if their organization already has access to view the documentation on the API catalog.
- **Updated Homepage / Dashboard** – The homepage and your personalized dashboard has been refreshed to allow for an improved user experience.
- **HTTP Verbs & API Roles** – You will now see exactly which API roles you have access to, with a brief description of how to get access to those you do not.

What action is needed on my end?

- Verify that the Organization ID associated with each of your credentials (System ID and User ID) are the same.
- Validate that your API keys have migrated successfully into your new dashboard.
 1. The name of your API keys will now be show as “Product Name_Creation Date_ 5 Unique #'s” (Example: Underwriting_9_23_2020_50122).
- Generate a new App (Client ID, Secret, API Key) with your existing credentials.
 1. This will help us validate all existing credentials still have the same access to create an application.

What has changed? How does it affect me?

- Corporate admins roles are now at the forefront to approve or deny any technology service provider (TSP) requests.
- With Birth-righted Organization Access, users will no longer need to request role access to the Developer Portal if their organization already has access to view the documentation on the API catalog.
- The migrated keys will remain the same and the name of your API keys will now be shown as “Product Name_Creation Date_ 5 Unique #'s” (Example: Underwriting_9_23_2020_50122)

What if I run into any issues with my credentials, etc.?

- As a lender, please contact your technology service provider OR Call **800-2FANNIE** (800-232-6643), press option **1**, and then option **1** again to be connected to the Technology Support Center.
