

Technology Services Invoices API

The Technology Services Invoices API automates the manual process that customers currently perform to consume, reconcile, and look up dollar amounts from their open invoices. The API returns data on open invoices, payments, and charge details provided via Fannie Mae's billable applications. The API offers customers the ability to build processes in their local systems to enable quick access to technology service invoices data and reduce the risk of discrepancies resulting from manually imported data.

Benefits

- **Streamline workflows** – Customers can establish processes within their local systems to quickly access data from technology service invoices through an API call.
- **Improved accuracy** – Automated processes reduce the risk of data discrepancies that often arise from manually importing data found in Fannie Mae Connect™.

When would I use Technology Services Invoices API?

Currently, servicers manually download these datasets from Fannie Mae Connect as reports and act on the invoice. With the API, servicers can automate the collection of invoice data used to review and pay Technology Service invoices. The API can also be leveraged to perform reconciliations on a monthly basis.

Key features

- Easy to integrate using standard API protocols.

Need help?

We're here to answer your questions and ensure your implementation of the API is successful. Submit a question to the **Fannie Mae Resource Center** or call 800-2FANNIE (800-232-6643) then press option 1, and option 1 again to be connected to the Technology Support Center.

How do I get started?

Contact your Sales Engineers or Customer Management Solutions Team representative to get started. See the **Quick Start Guide** for details.
