

Maintenance and Security Updates to Uniform Closing Dataset Integration Impact Memo

November 27, 2017
Updated | June 6, 2018

NOTE: *On June 6, 2018 this document was updated to include implementation dates for TLS 1.2 and the retirement date for TLS 1.0.*

Integrating with Fannie Mae helps you directly access our suite of services using your systems while providing an efficient data transfer process to your customers.

As part of maintenance and security updates, Fannie Mae will be disabling support of Transport Layer Security (TLS) version 1.0 and 1.1 protocols. Going forward, **TLS version 1.2** will be the only supported protocol. Please be aware that the TLS 1.0 will not be supported after Aug. 15, 2018 and TLS 1.1 will not be supported shortly after; therefore, we ask that you please upgrade to TLS version 1.2.

The following Uniform Closing Dataset (UCD) URLs are impacted:

Integration:

<https://businessgateway.intgefanniemae.com/service>

CLVE:

<https://businessgateway-clve.efanniemae.com/service>

Production:

<https://businessgateway.efanniemae.com/service>

These changes will be available in our integration environment on June 6, 2018 and will be applied to the production environment on June 30, 2018.

TLS 1.0 will be disabled in Integration on July 15, 2018 and Production on August 15, 2018.

If you have questions, please contact your Fannie Mae Integration team representative.
