

Developer Portal 2.0 Integration Impact Memo

September 17, 2019

On September 26, 2019, Fannie Mae will implement a new version of the Developer Portal 2.0. The changes in this release will not affect how integrated partners generate Client IDs, Client Secrets, Authorization Codes, Access Tokens or API Keys. This release will have no impact on integrated partners who have already successfully implemented a call to one of our APIs.

Please review the updates described below and in the Developer Portal September 2019 [Release Notes](#) to ensure that your integrated systems are prepared to support this release prior to September 26, 2019.

Auth Code

Lenders will have the ability to delete previously approved Technology Solution Providers' (TSPs) "Auth Codes". Plus, lenders will have the ability to view the unmasked Auth Code.

Auth Code Message

Technology Solution Providers will receive a clear message explaining that the lender has a specific amount of time to approve their request for an Auth Code.

Release Notes

Previous release notes can now be found in a consolidated location.

API Catalog

Users can now select a specific API from the API Catalog and copy its designated URL so they can be taken back to that specific API at any time without searching for it.

Release Support

The Developer Portal Version 2.0 September Update will be implemented in production on September 26, 2019. If you are unable to support this release prior to September 26, 2019, please notify [Technology Integration](#) with your risk mitigation plan to support the new release. The deadline for supporting the release must be 120 days from September 17, 2019.

If you have further questions about this process or need additional time to implement the new requirements, please contact [Technology Integration](#).
