Fannie Mae

Qualifying Interest Rate Used by Desktop Underwriter for Proposed Monthly Housing Expense for ARM Loans

June 29, 2026

The proposed monthly housing expense consists of principal, interest, taxes, insurance, and other assessments (PITIA) based on the fully amortizing repayment schedule and is included in the total expense ratio. For more information on qualifying payment requirements, refer to the *Selling Guide*, B3-6-04, Qualifying Payment Requirements.

The following table provides information on the qualifying interest rate Desktop Underwriter® (DU®) uses to calculate the PITIA when qualifying the borrower for an ARM loan.

DU ARM Plan	**Qualifying Rate**
FM GENERIC, 1 YR, 2% Annual Cap	Note rate plus 6%
FM GENERIC, 1 YR, 1% Annual Cap FM GENERIC, 3 YR	Note rate plus 5%
FM GENERIC, 5 YR	Greater of fully indexed rate[1] or note rate plus 2%
FM GENERIC, 7 YR FM GENERIC, 10 YR	Note rate **NOTE:** Higher-priced mortgage loans and higher-priced covered transactions must be manually underwritten if the fully indexed rate is greater than the note rate.
DU Plan	**Qualifying Rate**
Lender ARM plan* *ARM plan number not recognized by DU as a Fannie Mae ARM plan	▪ Qualifying rate entered in the ARM Qualifying Rate field in DU ▪ If the ARM Qualifying Rate field is not entered, DU will use the note rate plus 5%

[1]The fully indexed rate is defined as the index plus the margin as entered in the online loan application. The fully indexed rate is rounded to the nearest one-eight percent per the Selling Guide, B2-1.4-02, Adjustable-Rate Mortgages (ARMs).

NOTE: *For loan casefiles underwritten with DU Version 12.1 or after, if the value entered in the Qualifying Rate field for an FM Generic ARM is higher than the qualifying rates specified above, the value in the Qualifying Rate field will be used.*
