

# Desktop Underwriter/Desktop Originator Integration Impact Memo

## Cloud Migration

Jan. 22, 2025

In 2024, Fannie Mae successfully transitioned Desktop Underwriter® (DU®) from an on-premises to a cloud infrastructure. Building on this success, we are preparing to migrate Desktop Originator® (DO®) to the cloud in the production environment. This strategic move will enhance our agility, scalability and overall operational efficiency.

### Key Information:

- The changes in this update will apply to new loan casefiles submitted to DO during or after the weekend of March 15, 2025.
- Existing casefiles created before the weekend of March 15 will remain on-premises and can be resubmitted as normal.
- No action is needed from DO end users. The transition will take place behind the scenes as a back-end operational release.

### How will this affect my integrated system(s)?

To ensure a seamless transition and prevent any impacts to your direct integration and third-party originator (TPO) solutions, we recommend testing your DO integrated solution(s) and TPO workflow to confirm they operate normally.

Integrated solutions that support import of a DU Spec. MISMO 3.4 file will need to complete testing prior to the production date.

### Release Support

On or about Feb. 1, this update will be available to test in the DU integration environment, and test cases will be published in the DU section of the [Technology Integration Resources](#) webpage.

If you have questions about the integration impact or if you require support specific to this release, contact your Technology Integration Analyst or [Integration Support](#). For more information about DU, visit the [website](#) or contact your Fannie Mae representative.
