## Introduction

---

This document highlights six of the new UAD data points that drive the property type for the redesigned Uniform Residential Appraisal Report (URAR). With the new URAR, the data that describes the subject property drives the appraisal report, not a form type/number.

## Purpose

---

Use this document to:

- Help understand how the URAR's dynamic structure along with discrete and repeatable data replaces the legacy form numbers.
- Assist with transitioning to the redesigned report.

*This document is a reference for mapping legacy forms to property characteristics, not about eligibility. While every effort has been made to ensure the reliability of the information in this document, the respective government sponsored enterprise (GSE) Guides, are the official statements of policies and procedures.*

## Typical Properties

---

The information contained on the [Legacy Forms Mapping](#) table includes properties that have a clear map or correlation from the legacy form numbers to new URAR property characteristics. Atypical properties, which do not have a clear mapping are not included and are addressed in [Atypical Properties](#).

## Column Descriptions for Legacy Forms Mapping

## Atypical Properties

---

Atypical properties, which do not have a clear mapping are not included in the [Legacy Forms Mapping](#). The URAR fills the gap on the properties that, due to certain property characteristics, did not fit on a legacy form. The new URAR can accommodate the distinct characteristics of each property.

- Properties with more than 1 accessory dwelling unit (ADU)
- Site condominium (also referred to as detached condo)
- Manufactured Home with more than 1 unit
- Manufactured Home with an additional construction method
- Manufactured Home - condominium or cooperative
- Hybrid (independent of property type)
- Desktop (independent of property type)
- Condops

## Atypical Properties Mapping with Property Characteristics

This table provides examples of atypical properties with property characteristic mapping. These examples did not have a specific legacy form but are now accommodated with UAD 3.6 and the new dynamic URAR.
